

PROFESSIONAL BIO

My interest in the fourth industrial revolution led me to a passion in web development. My journey began in February 2019 at Naspers labs, when I taught myself how to build a responsible real world website on udeMy as well as javascript basics on free code camp. Through Naspers labs, I qualified for a 1 year systems development learnership at Umuzi. Where I learnt fullstack web development technologies and participated in a product team building the umuzi recruitment portal. I am now currently upskilling on python and django. My aim is to one day make a tangible social impact in society, through software development and use these skills to the benefit of the world in general and the african continent in particular.

INTERESTS

- 4th Industrial revolution
- Tech meetups
- Hackathons
- Travelling
